Tennessee Drought Update

For the assessment period ending May 16, 2023

This Week's Drought Monitor of Tennessee Map

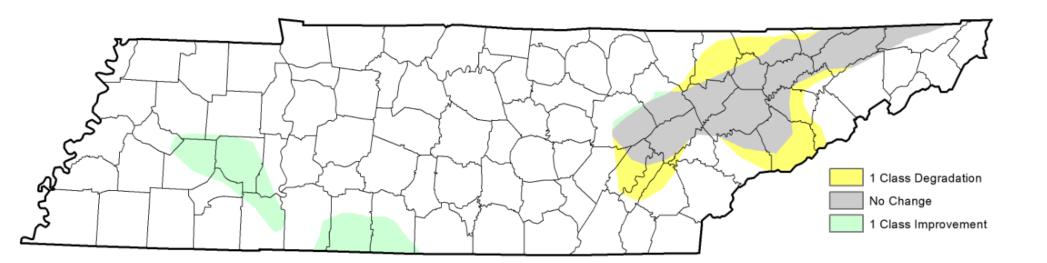

From the US Drought Monitor, authored by Brad Rippey, U.S. Department of Agriculture with input from the Tennessee Climate Office

Conditions in West and Middle Tennessee have improved, removing any drought consideration in this week's drought monitoring period (Tuesday to Tuesday) Conditions in East Tennessee have worsened, causing Abnormally Dry (DO) conditions to expand in East Tennessee.

Change Since Last Week

A product of the **Tennessee Climate Office**www.etsu.edu/tn-climate

Statewide Condition Summary

What's Changed? With heavy rains in West and Middle Tennessee there was a 1 category improvement, clearing D0 in those regions in this week's drought monitoring period (Tuesday to Tuesday). For East Tennessee, conditions remained drier than normal for many areas causing abnormally dry (D0) conditions to extend further. In total for the state there was a slight decrease in the area covered by D0 this week compared to last week.

What's New? With variable rainfall amounts and warmer temperatures, both D0 areas were removed for West and Middle Tennessee while being extended in East Tennessee and the Cumberland Plateau.

What's Next? Light to moderate rain is expected in the remainder of this week's drought monitoring period, with the highest rainfall totals expected in West TN. Normal to slightly warmer than normal temperatures are also forecasted for this weeks drought monitoring period (Tuesday to Tuesday). Conditions are expected to remain steady although further degradation is possible in some areas of East Tennessee.

Statewide Coverage By Category

Category		Coverage This Week	Change Since Last Week
D0: Abnormally [ry	14.34%	-0.28%
D1: Moderate Dr	ought	0.00%	0.00%
D2: Severe Droug	jht	0.00%	0.00%
D3: Extreme Dro	ıght	0.00%	0.00%
D4: Exceptional Drought		0.00%	0.00%
